The X-factor – patented intelligence.¹

A new photochromic system.

NEW

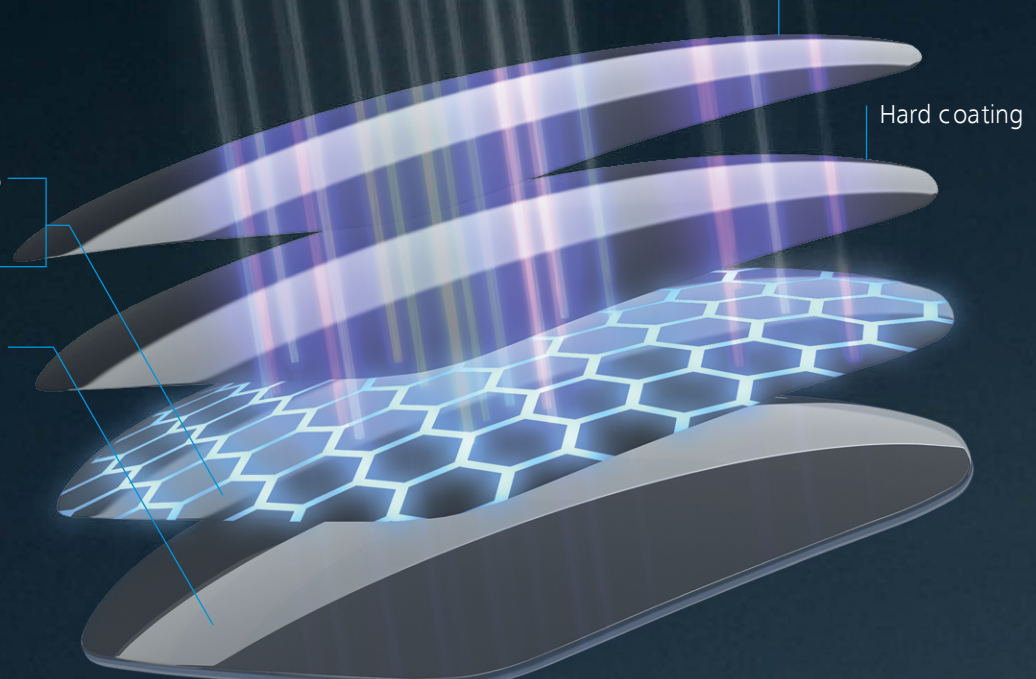

Photochromic dye compounds

Photochromic carrier matrix

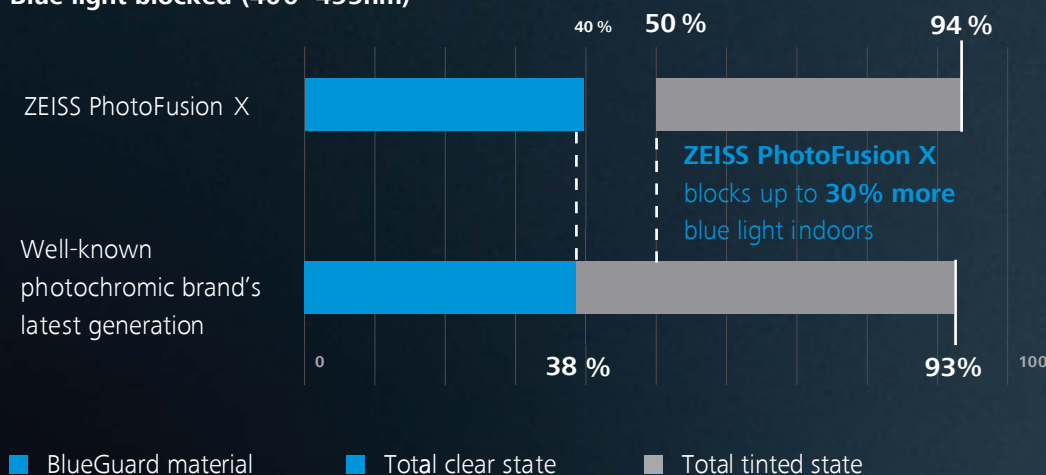

ZEISS BlueGuard lens material

DuraVision® coating

Hard coating

Blue light blocked (400–455nm)

The **ZEISS BlueGuard lens material** already blocks 40% of potentially harmful blue light. With the added photochromic treatment, this increases to up to 50% indoors and up to 94% outdoors when fully tinted.² It also blocks 100% UV radiation all the time.

1. | US Patents 5,910,516; 6,723,859; 7,521,004; other patents pending 2. | Analyses by Technology and Innovation, Carl Zeiss Vision GmbH, DE 2021. Based on Blue Violet Block (BVB) metric that quantifies the amount of light 400–455 nm blocked by PFX Extra Grey 1.6 HC form.

Performance perfected.

Speed X darkness X clarity X protection.

Seeing beyond

Faster clear. Faster dark.

- Clears up to **2.5x faster** than a well-known photochromic brand's latest generation¹
- Clears up to **80% faster** than before²
- Darkens up to **60% faster** than before³
- Only **15 seconds** to effective glare protection⁴

Unique blue light & UV protection

- Now with **ZEISS BlueGuard** lens material
- Blocks up to **50% potentially harmful blue light indoors** and up to **94% outdoors** when fully tinted⁵
- **Full UV protection** up to 400 nm at all times – indoors and outdoors, clear or dark

Perfect clarity indoors

All ZEISS PhotoFusion X colours are **fully clear indoors** with up to 94% transmission

Sunglass-level darkness outdoors

1. Testing by independent laboratory in USA, 2021 according to requirement in ISO 8980-3. Based on the average speed (%T/min) of fade-back from fully activated state to 80%T at 23°C in grey 1.50 index (CR607) HC only form. Compared to a well-known photochromic brand's latest generation in 1.5 grey. 2. Testing by independent laboratory in USA, 2021 according to requirement in ISO 8980-3. Based on the average speed (%T/min) of fade-back from fully activated state to 80%T at 23°C in grey 1.60 index and Polycarbonate HC only form. 3. Analyses by Technology and Innovation, Carl Zeiss Vision GmbH, DE 2021 in accordance to ISO 8980-3. Based on the average speed (%T/min) of activation from clear state to 30%T at 23°C in grey 1.60 index and polycarbonate in HC only form. 4. Analyses by Technology and Innovation, Carl Zeiss Vision GmbH, DE 2021 in accordance to ISO 8980-3. PhotoFusion X Grey or Extra Grey at 23°C, 1.6 index with HC. 5. Analyses by Technology and Innovation, Carl Zeiss Vision GmbH, DE 2021. Based on Blue Violet Block (BVB) metric that quantifies the amount of light 400-455nm blocked by PFX Extra Grey 1.6 HC form.

ZEISS ClearView FSV Lenses:

It's stock, but it's definitely not standard.

Up to 16% thinner

Up to 16% thinner than ZEISS spherical (SPH) FSV and up to 8% thinner than ZEISS aspherical (AS) FSV – **without compromising vision.**^{2,3}

Up to 49% flatter

Freeform in stock

Point-by-point optimisation process using 700 free parameters in every lens design.

Up to 49% flatter compared to ZEISS spherical (SPH) FSV and up to 32% flatter compared to ZEISS aspherical (AS) FSV – **without optical compromise.**^{4,5}

3x larger zone of clarity

Clear viewing from the lens centre to the periphery with a zone of excellent vision clarity, on average 3x larger, compared to ZEISS aspherical (AS) FSV lenses.¹

ZEISS DriveSafe Lenses

ZEISS DriveSafe Lenses is a product category for everyday use. It is specifically designed to meet the vision needs of people who want to feel safer and more comfortable when driving with their everyday lenses. ZEISS DriveSafe Lenses are available in both single vision and progressive lens types.

Better vision in low-light conditions, thanks to ZEISS Luminance Design Technology.

Reduced glare at night from oncoming cars and street lights, thanks to the DuraVision® DriveSafe UV Coating.

Accurate viewing of the road, and easier focus when switching between dashboard and mirrors, thanks to the DriveSafe Design.

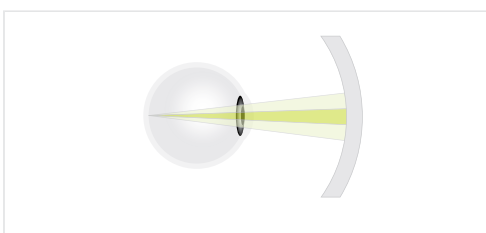

ZEISS has developed an everyday lens solution consisting of three elements to make driving safer and more comfortable.

Luminance Design® Technology by ZEISS takes into account the **pupil size in low-light conditions**

DuraVision® DriveSafe UV Coating by ZEISS reduces **perceived glare up to 64%***

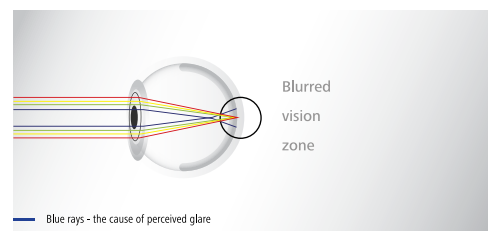

ZEISS DriveSafe Lens Design incorporates up to **43% larger mid-distance zone** for easier focus switching between dashboard and mirrors. And up to **14% larger far-distance vision zone** for a wider view of the road

ZEISS Luminance Design™ Technology

ZEISS Luminance Design™ Technology is the solution to **balance the light conditions when driving at night and low light conditions**, introducing the mesopic pupillary diameter in the optimization of the design in both progressive and single vision lenses.

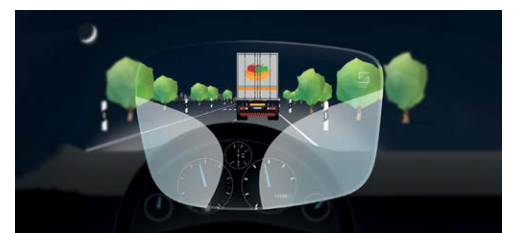

ZEISS DuraVision® DriveSafe Coating

The bright light from oncoming cars are scattered, the blue light is a part of the spectrum that is suffering the greater degree of dispersion, blurring inside the eye, causing glare, and blurred images.

DuraVision® DriveSafe Coating partially reflects these wavelengths, **which reduces perceived glare up to 64%** compared to premium AR coatings*.

DriveSafe Lens Design

This new design provides a convenient position when driving. Dynamic vision is facilitated to provide a soft and fast switch from distance to intermediate for a sharp vision of the dashboard.

Near vision zone is sufficient to perform the activities that daily life demands.

All illustrations are simplified examples. Effects are subject to personal behaviour and prescription.

**Don't miss a single
detail on the road -
even in the rain, mist
or at dusk.**

The next generation of blue light blocking lenses.

What is blue light?

Blue light is the high energy part of the light ranging from about 380nm in the blue-violet range to 500nm (blue-turquoise). Today's light source and digital devices emit a disproportionally high amount of blue light and may contribute to discomfort glare and therefore could play a role in the perception of digital eyestrain.

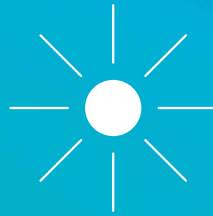

Sources of blue light

TVs

Computers

Sun

Smartphones & Tablets

LED Lights

More protection, less reflection.

More protection:

Built on the foundation of ZEISS UV Protect Technology, the ZEISS BlueGuard Lens material provides full UV Protection and now additionally **blocks up to 40%¹** of potentially harmful and irritating blue light.

Less reflection:

For good looks on and offline, ZEISS BlueGuard Lenses have up to **50%² less reflections** of digital blue light compared to ZEISS DuraVision BlueProtect coating. It comes with standard ZEISS DuraVision Platinum Coating for excellent clarity, easy cleanability and superior hardness.

Easy on the eyes:

Designed to address digital eye strain in an increasingly digital world.

1. | Built on the foundation of ZEISS UVProtect Technology, the ZEISS BlueGuard lens material provides full UV Protection and now additionally blocks up to 40 % of potentially harmful and irritating blue light. Source: Inhouse measurements and calculations based on the BVB (Blue-Violet-Block) metric. Analyses by Technology and Innovation, ZEISS Vision Care, DE 2020.

2. | For good looks on- and offline, ZEISS BlueGuard Lenses have up to 50 % less reflections of digital blue light compared to ZEISS DuraVision BlueProtect coating. Source: Inhouse measurements and calculations based on the DBRLED (Digital Blue Light Reflection) metric. Analyses by Technology and Innovation, ZEISS Vision Care, DE 2020.
